The **ULTIMATE GREEN** clean machines™

# RO TROLLEY

from Pure Rinse

### Features

- 3000 gal. (11,000 ltr.) per day capacity
- Triple prefiltration
- 50 gallon storage tank
- High rejection membranes
- High capacity PUMPTEC pumps
- 18" Hose reel
- 300' non-marking hose
- Size: 32"D x 57"W x 52"H

***The highest capacity system on the market!***

# The RO TROLLEY from Pure Rinse

## The RO Trolley from Pure Rinse Systems is an all-in-one patented mobile design.

It combines a high capacity 3000 gallon (11,000 liter) per day Reverse Osmosis (RO) unit with a storage and distribution system. The high flow, high pressure distribution system is ideal for water-fed pole window cleaning and allows for the use of three poles at the same time and hose lengths of over 1000 feet.

For the most demanding spot-free cleaning jobs, the optional deionization (DI) system attaches easily for further polishing of the purified RO water. RO followed by DI is the most economical and efficient way to make spot free water and the RO Trolley is a great way to produce it on site.

## What others in window cleaning are saying:

“My system with its 50 gallon tank out performs my old 200 gallon van unit.

My RO Trolley is small, robust, well constructed and makes water like crazy.”

— Kevin Freeman, Window Commandos, Tonganoxie, KS

“Our Pure Rinse RO Trolley gives us the flexibility and production to complete our work in a safe and timely manner.

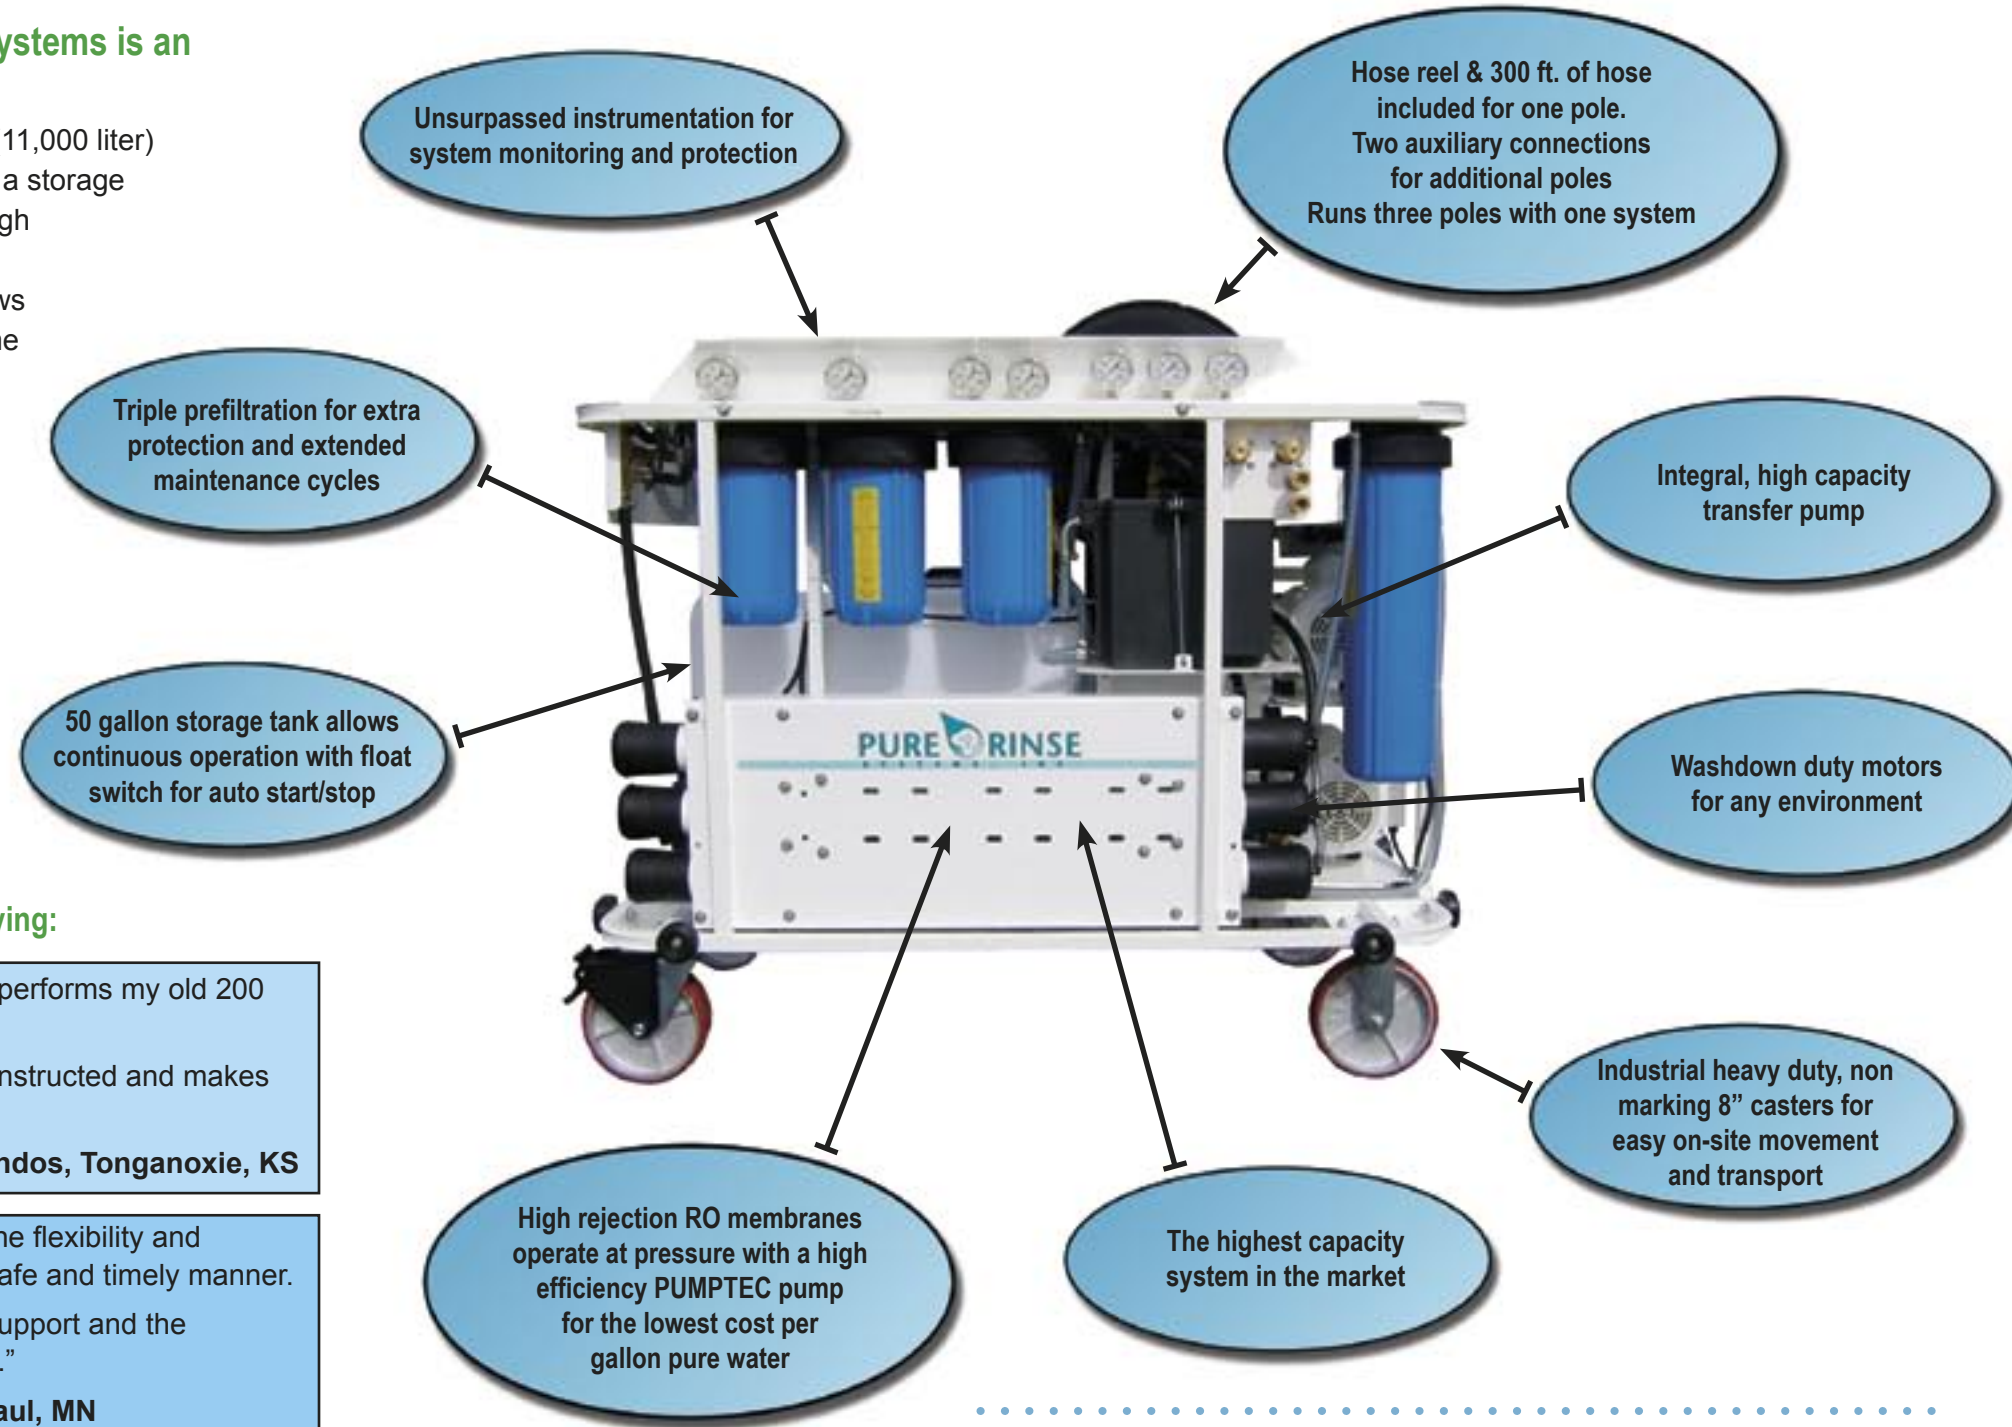

Pure Rinse has also given us quality support and the equipment exceeded our expectations.”

— Jim Diebel, Diebel Services St. Paul, MN

“Our Pure Rinse RO system has given our company the competitive edge we were looking for.

The people at Pure Rinse have always been attentive and pleasant to deal with.”

— Jason Rudman, Quality Glass Cleaners, Carrollton, TX

## Other Features:

- Large 3000 gallons (11,000 ltrs.) per day capacity means the RO Trolley can keep up with your crew on the job
- Total system power draw is less than 15 amps
- Quick connect fittings on every inlet and outlet for easy on site set up and take down
- Hose Reel: 18” with tension adjuster and lock
- Roller guides for easy extension/retraction of hose
- Dump valve on storage tank for simple and quick shutdown
- Pumps and motors have resilient mounts for low noise and vibration
- Complete instrumentation offers the operator control and peace of mind. Pressure gauges for inlet filter condition, membrane pressure and transfer pump pressure.
- Easy access pressure regulators means you can simply adjust the RO and transfer pump pressures to changing conditions
- Pumps are identical which makes maintenance faster and less expensive
- GFCI on the power connection for electrical safety
- Designed for easy service: membranes, filters, DI and pumps are all accessible with no dismantling of the unit
- Integral Tool box for storage
- Integral pole holder doubles as a gauge protector
- Bumpers mounted on frame
- Epoxy coated steel frame made with modular components for fast and simple servicing
- Fast Flush system installed to make system shut-down a simple process
